ORGANIZATION OF THE CENTRAL STERILIZATION DEPARTMENT AND THE OPERATING UNIT IN COVID HOSPITAL BATAJNICA, UNIVERSITY CLINICAL CENTER OF SERBIA, BELGRADE, SERBIA

V. Mijoljević¹, T. Vukobratović², Z. Lencar³, D. Jovanović⁴, S. Vukobratović⁵, I. Lohović⁶,
University Clinical Center Of Serbia - Belgrade (Serbia), Covid hospital Batajnica

Aim: COVID Hospital Batajnica belongs to the University Clinical Center of Serbia. Hospital Batajnica received the first patients on December 4, 2020. The largest covid hospital in Europe has the capacity of 937 hospital beds (250 intensive and 687 semi-intensive). The knowledge and expertise of doctors combined with modern equipment available at COVID Hospital in Batajnica, enabled rapid and adequate treatment of patients with COVID 19.

University Clinical Center Of Serbia - Belgrade (Serbia), Covid hospital Batajnica

Methods: To present the organization of the Central Sterilization Department and the Operating Unit of COVID Hospital Batajnica, University Clinical Center of Serbia. Applied descriptive method. **Results:** Operating unit, area 42m² of COVID hospital Batajnica, has one operating theater and one delivery room. On March 14, 2021, the first surgical intervention was performed. The total number of surgical interventions until September 2021 is 70, including orthopedic, abdominal, vascular, thoracic, urological and maxillofacial surgery. Within the operating block there is a Central Sterilization Department, 50 m². Within this state of the art department, there is Decontamination area with machine washing of instruments, Clean area with the line for individual packaging of washed and disinfected instruments in rolls or cassettes, from which they then undergo the process of sterilization in a steam autoclave. The central sterilization department also has sterilizers of modern technology (formaldehyde and plasma sterilizers). The Central Sterilization Department also includes Sterile area, the space for proper storage of sterilized material.

Organization CSSD - Covid hospital Batajnica

Conclusions: The modern organized and equipped Central Sterilization Department ensures a proper and safe process of sterilization of instruments and their adequate storage. The knowledge and expertise of doctors combined with modern equipment available at COVID Hospital in Batajnica, enabled rapid and adequate treatment of patients with COVID.

ORGANIZATION OF THE CENTRAL STERILIZATION DEPARTMENT AND THE OPERATING UNIT IN UNIVERSITY CLINICAL CENTER OF SERBIA, BELGRADE, SERBIA

V. Mijoljević¹, M. Ercegović², G. Kaljević³, M. Markić⁴, S. Nikolić⁵, M. Jakšić⁶,
University Clinical Center Of Serbia (Belgrade),
Emergency Center University Clinical Center Of Serbia,
Department of Hospital Epidemiology, University Clinical Center Of Serbia¹

Aim: Instrument sterilization is part of the daily work process in hospitals around the world. This important process enables the safe work of the medical staff as well as the safety and security of the patients. Modern scientific and technical achievements have found their place in this field of medicine as well.

Methods: To present the organization of the Central Sterilization Department and the Operating Unit of University Clinical Center of Serbia. Applied descriptive method.

Results: The new building of the University Clinical Center of Serbia was opened in April 2022. In this building there is a large operating block, with an area of 5000 m², which has 22 operating rooms. Within the operating block there is also a modern surgical theater for minimally invasive surgery. In the period from April 2022 to April 2023, more than 10,000 surgical interventions (abdominal, orthopedic, thoracic surgery, urology, maxillofacial surgery). In this area building there is also a modern space for central sterilization CSSD, with an area of 900 m². There is a Decontamination area with machine washing of instruments, and a Clean area with a line for individual packaging of washed and disinfected instruments in rolls or cassettes, from which they are then subjected to the sterilization process in a steam autoclave. The central sterilization department also has modern technology sterilizers (formaldehyde and plasma sterilizers). The central sterilization department also includes a sterilization area, a space for proper storage of sterilized material.

Conclusions: The modern organized and equipped Central Sterilization Department ensures a proper and safe process of sterilization of instruments and their adequate storage. The knowledge and expertise of medical staff in combination with the modern available equipment ensures safety at work in the hospital.

Key words: sterilization, CSSD, surgery.
