## First CSSD Open Day at Anning District People's Hospital

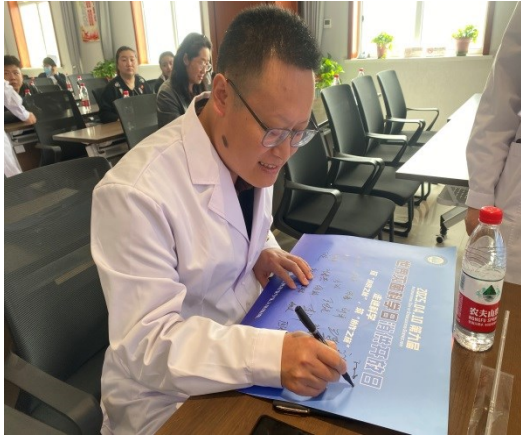

### Exploring the Secrets of Sterile Supply and Building a Collaborative Journey

The World Federation for Hospital Sterilisation Sciences (WFHSS) sets up the International Day of Sterilisation Sciences on April 10. This initiative calls for global sterile supply centers to open their doors on this day. They invite all relevant healthcare staff to explore CSSD, visit the working environment, and understand the workflow. Through interactive communication, the aim is to enhance mutual understanding and trust, promoting positive collaboration. The event also aims to publicize the entire process of instrument reprocessing and relevant sterilization science knowledge through on-site visits, demonstrations, and interactive communication, thereby deepening everyone's understanding of sterile supply centers and enhancing the safety and effectiveness of sterile supply.

Our CSSD actively responded to this call to enhance understanding and collaboration between the CSSD and operating room, clinical departments, and partnership organizations. On April 8, 2025, we held an open day event with the theme of "Exploring the Secrets of Sterile Supply and Building a Collaborative Journey." We sincerely invited 50 participants, including hospital leaders, staff from the Nursing Department, Infection Control Department, Operating Room, clinical departments, and leaders and personnel involving in infection control and sterile supply from the Anning District Medical Community.

#### Sign-in

Shen Weihong, the director of the nursing department hosted this event

Speech by Sun Zhigang, Deputy Director of the Anning District Health Commission: He emphasized that this open day event aims to allow everyone to gain a deeper understanding of the work processes and significance of the CSSD. He hoped that through this event, communication and cooperation among various departments can be enhanced, contributing collectively to the development of the healthcare affairs in Anning District.

The head nurse of the CSSD showed the achievements of the sterile supply center to all medical personnel attended, illustrating their workflow and the achievements of the medical community.

Exploration on Site: Participants visited standardized working areas, witnessing the entire reprocessing process from collecting, cleaning to sterilization.

To practice industry standard operating protocols, key personnel from the CSSD demonstrated their reprocessing skills.

Visitors were divided into two groups, with Quality Control Leader Wang Bianli leading their tour. There were guides in each working area to provide detailed explanation. Their tour started from the corridor, where sets the department culture wall. All visitors wore impermeable gowns and head covers.

Personnel in the Sterile Distribution Area explained the storage and distribution process of sterile items.

Personnel in the Inspection, Packaging and Sterilization Area explained packaging requirements for instruments, methods for inspection, working principles of sterilizers, loading requirements for items to be sterilized, and the operation of sterilizers.

Personnel in the Decontamination Area explained the proper protective measures for staff, the cleaning process, and the disinfection and drying process.

This CSSD Open Day focused on in-depth communication regarding instrument safety and interdepartmental collaboration, aiming to establish an efficient and safe medical defense. Through a transparent and interactive format, the event enhanced the understanding of sterile supply and trust of all nursing staff in the hospital and district. The CSSD Open Day event was a great success, thanks to the strong support and encouragement from the Anning District Health

Commission, Anning District Medical Community, hospital leadership, functional departments, and all medical staff.

The CSSD of Anning District People's Hospital will take this opportunity to continue to improve professional knowledge and technical skills, adhere to standard protocols, implement operating guidelines, optimize operational processes, and maintain our commitment to safeguard the safety and quality of medical care!
