

International Day of Sterilisation Sciences

CSSD joining hands with OR and focusing on Sterilization

Unveiling the myths of CSSD, Building a health defense line

To celebrate the upcoming International Day of Sterilisation Sciences and enhance the mutual understanding and effective communication, the CSSD of Bengbu Hospital of Shanghai General Hospital held a CSSD Open Day event with the theme of " Unveiling the myths of CSSD, Building a health defense line " on March 26th.

This event invited Director Chen Lingling from the Nursing Department, Director Song Qi from the Infection Control Department, Head Nurse Tang Huiqin from the CSSD of OR, and head nurses from various clinical departments.

The visiting of CSSD covered three areas and followed the decontamination of instruments. Zhang Zhen, the Head Nurse and Wang Yuxia, the major staff, introduced guests to the three working areas, witnessing how the instruments were cleaned through ten major processes, returning, sorting out, cleaning, disinfection, drying, inspection, packaging, sterilization, storage and distribution.

To better showcase the whole process from inspection, packaging to sterilization readout and distribution, visitors experienced the packing with their own hands. The last and most crucial step after sterilization is to decide whether the pack is qualified to ensure the safe use. Zhang Zhen explained how to interpret results and its basis to visitors by virtue of her professional knowledge.

On-site visit

After the professional explanation, it was time for test. At the end of the visit, there was a fun fault finding game. The CSSD had prepared problematic packs in advance. Everyone actively discussed and searched for problems together.

This activity not only enhanced the understanding of CSSD and reprocessing processes, but also promoted the cooperation with clinical departments. It played a positive role in improving the medical safety system. CSSD will constantly enhance their professional competence and optimize working processes to serve all clinical departments.
