

Unveiling the myths of CSSD, Building a way of Cooperation

The International Day of Sterilisation Sciences - CSSD Open Day

Liu Daojing Chengdu Jinniu People's Hospital

CSSD Group of Sichuan Primary Medical Institution

To publicize the procedure of instrument reprocessing and related sterilization knowledge, deepen people's understanding of the CSSD and promote the safety and effectiveness of the supply and use, it is helpful to allow for on-site visits, operational exercises and interactive communication. On April 7, 2022, the event of the International Day of Sterilisation Sciences was held in the CSSD of Chengdu Jinniu People's Hospital. It was hosted by the Chengdu Jinniu People's Hospital and co-organized by CSSD group of Sterilization and Infection Control Professional Committee of China Health Inspection Association and Nursing Committee of Chengdu Jinniu Medical Institution. The theme of the event was "Unveiling the myths of CSSD, Building a way of Cooperation". More than 20 people, including directors, head nurses and business experts from more than 10 departments in the hospital, participated in this event.

This event was hosted by Liu Daojing, a member of CSSD Group of Sichuan Primary Medical Institution and the Sterilization Supply Committee of Chengdu Nursing Institution, and the head nurse of CSSD in Chengdu Jinniu People's Hospital. Weng Yiwen, Vice Dean of Chengdu Jinniu

People's Hospital, delivered an opening speech.

During this event, all personnel wore personal protection equipment, including disposable hats, surgical masks, disposable surgical gowns and shoe covers. Under the guidance of instructors, they visited many functional areas such as the sterile storage area, inspection, packing and sterilization area and decontamination area.

The staff of CSSD demonstrated the process of cleaning, disinfection, drying, inspection and packaging, and sterilization of rigid hollow devices. It was a great opportunity for everyone to learn about the sterilization process of various medical devices.

After visiting, the staff of CSSD communicated with the visitors. They hoped that through joint effort of different departments, the staff in CSSD could strictly implement the requirements of “two regulations and one standard” so that they can improve processing quality and patient safety. Then, Fu Yuting, the director of nursing department summarized this event.

The CSSD is the core department for disinfection, sterilization and supply of sterile items in the hospital, and it is an important backup for clinical medical services. The quality of its work is closely related to the health care associated infections. Given the regular epidemic prevention and control, this event not only let people fully understand the working procedure of the CSSD, but also allows the public to supervise its daily work.
