

Effective Communication, Innovative Development | The 8th International Day of Sterilisation Sciences · CSSD Open Day Activity
Hosted by: Deyang People's Hospital

By: Chen Cuiying
Head Nurse of CSSD of Deyang People's Hospital

To answer the call of the World Federation for Hospital Sterilisation Sciences (WFHSS), the CSSD of Deyang People's Hospital held a unique open house event with a theme of "Effective Communication, Innovative Development" on March 31, aiming to allow children to understand their parents' work. Early in the morning, the children started their visit with curiosity.

At the opening ceremony, head nurse Chen Cuiying introduced the significance of the event to the children, and introduced the work process of the CSSD in a simple and easy-to-understand manner through a vivid video display.

Chen Zhongyi, Quality Control team leader, and Zhang Wei, Teaching Team leader, led the children to visit the CSSD

Children were inspecting the delicate instruments under magnifying light

Children were inspecting lumens

Children were learning how to pack

Head nurse Chen Cuiying also performed a digital game and pointed out that CSSD work was like completing a jigsaw puzzle. We assembled tens of thousands of types of instruments and put them into packages every day. It required good memory and cautiousness. The children also felt that their parents' work were not simple.

The children took an active part in the tour and head nurse Chen rewarded them with small gifts.

Through this event, the children unveiled the "mystery" of instrument reprocessing. We not only demonstrated the professional skills, but also conveyed our expectations and confidence in future innovation. We believe that these children would play an important part in future technological innovation. Let us hope that they can carry forward their experiences and insights in their future study and life, and inject new vitality into innovation and development.
