

## Driven by Love and Empowered by Communication in Sterile Supply | The Fuyang Sterile Supply Medical Quality Control Center Hosts the 2025 International Day of Sterilisation Sciences Open Day Event

On April 10, 2025, coinciding with the ninth International Day of Sterilisation Sciences, the "2025 International Day of Sterilisation Sciences and CSSD Open Day" event was held at Fuyang Cancer Hospital. This event was organized by the Fuyang Sterile Supply Medical Quality Control Center. The theme of this event was "Driven by Love and Empowered by Communication in Sterile Supply." More than 40 participants attended, including members from the Fuyang Sterile Supply Medical Quality Control Center and quality control nurses and key staff from 14 medical institutions.

Li Xiaoyan, Assistant of President of Fuyang Cancer Hospital, delivered a speech for the event, highlighting the important role of the sterile supply center in hospital infection control, supply assurance, and response to public health emergencies. She hoped that the staff of the CSSD would promote their services, use communication to strengthen collaborative effectiveness, and use innovation to promote discipline development, advancing the work of the sterile supply center to new heights.

Yang Juanjuan, Director of the Fuyang Sterile Supply Medical Quality Control Center, stated that there is no small matter in medical safety, and there is zero tolerance for sterile quality. She expressed the hope that this open day would serve as an opportunity to build consensus within the industry, explore innovations in sterilization technology and quality control difficulties, and promote more standardized operations in the sterile supply center, winning the trust of clinical departments through transparency. She emphasized the importance of gathering cooperation in communication and empowering sterile supply to jointly safeguard patients' "invisible safety line."

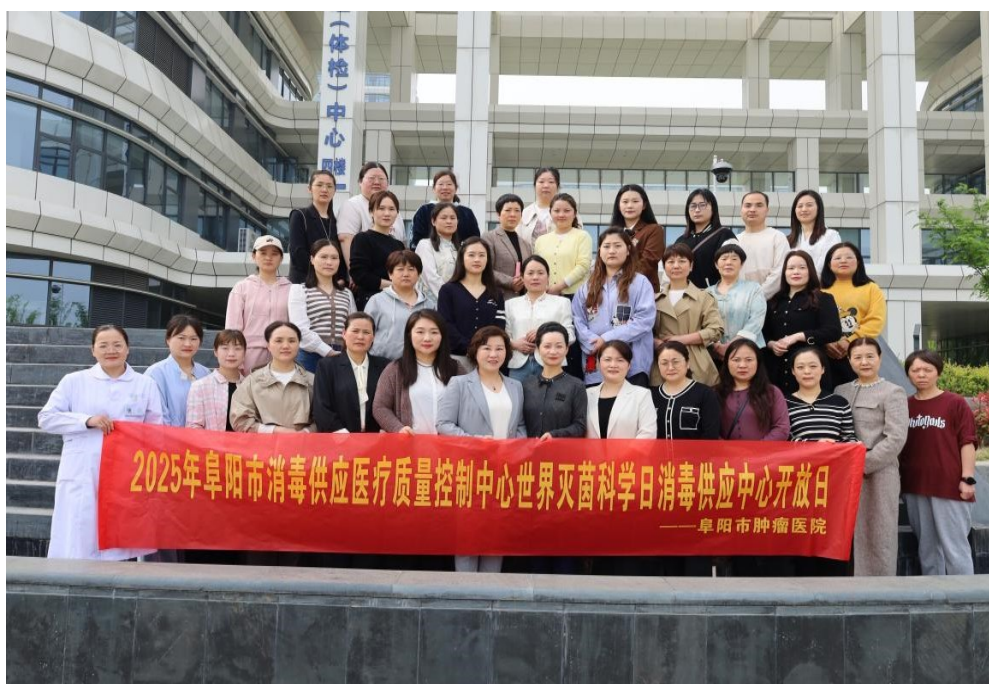

Participants watched a science popularization short film titled “The Rebirth Journey of Reusable Instruments” made by Fuyang Cancer Hospital in the conference hall.

Following this, participants donned protective equipment and, under the guidance of staff, entered various areas of the CSSD at Fuyang Cancer Hospital, observing the entire process of medical instrument reprocessing from collection, classification, cleaning, disinfection, to packaging, sterilization, storage, and distribution. During the event, the professionalism and standardization of sterilization were comprehensively showed through site visits, process explanations, and interactive Q&A sessions, building a bridge for efficient collaboration between clinical departments and the CSSD.

In the discussion session, guest speakers explained the application of intelligent monitoring systems in the CSSD, and Director Yang Juanjuan provided a detailed interpretation of the "Sterile Supply Quality Control Indicators."

“Driven by Love” is the silent vow of sterile professionals to safeguard patient safety through expertise; “Empowering Communication” serves as a guiding principle for interdisciplinary and inter-field collaboration. The cleanliness and sterility of each instrument are backed by countless standardized practices and attention to detail; each collaboration between departments carries trust, responsibility, and an unwavering pursuit of excellence. The open day event enhanced the safety awareness of healthcare professionals, strengthened the hospital infection control system, and fostered understanding in multidisciplinary collaboration, enabling each healthcare

personnel to practice his mission in future work and safeguard every entrusted life with professionalism and warmth.
