The spring breeze is blowing, and the flowers are blooming. In active response to the call of WFHSS, in this beautiful spring season, the Fuyang City CSSD Quality Control Center, cooperating with the Fuyang City People's Hospital CSSD, held an Open Day event of the International Day of Sterilisation Sciences themed "Safety, Efficiency, Standardization, Dedication: the Efficient Circulation and Standardized Reprocessing of Urgent and Precision Instruments.

This event was chaired by YANG Juanjuan, Director of the Fuyang City CSSD Quality Control Center.

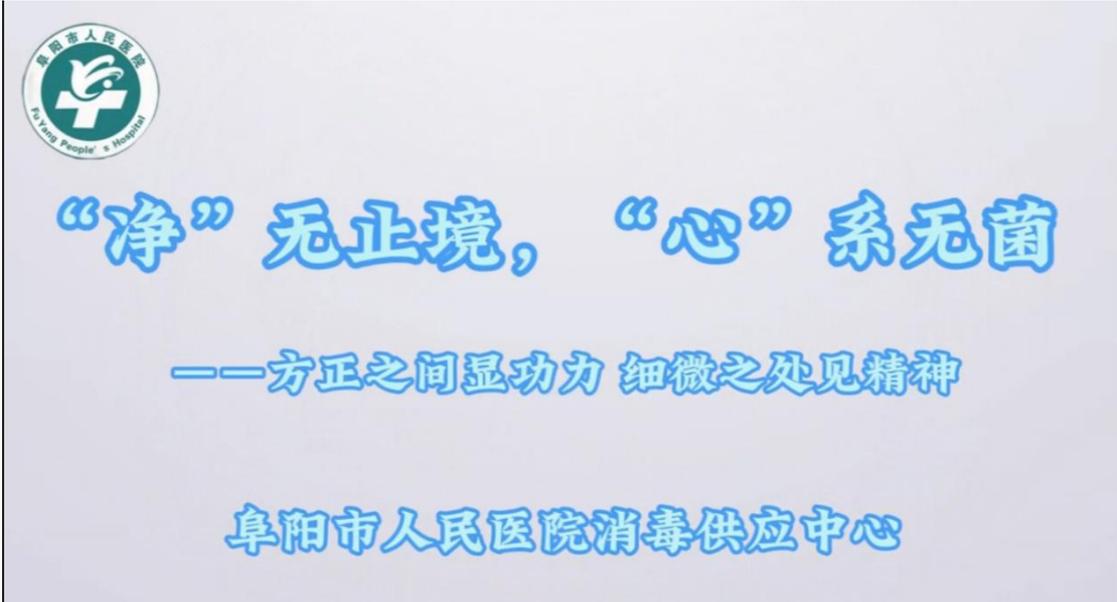

Vice Dean ZHU Zhenhua, Director of Nursing Department LIU Yiyong, Director of IPC Office SHEN Shihua, Chief of Health Services Section ZHAO Yong, Deputy Director of Quality Control Office YANG Xuemei, Deputy Chief of Equipment Department LIU Zhiyong, along with department heads, head nurses, and expert committee members from the Fuyang City CSSD Quality Control Center attended this activity. The guests signed and took group photos at the signature wall.

Vice Dean ZHU Zhenhua of Fuyang People's Hospital delivered a speech, emphasizing that as a department providing healthcare service, the CSSD is a crucial part of the hospital system. She highlighted its indispensable role in hospital infection prevention and control, material support, and enhancing the ability of medical institutions to respond to public health emergencies. Details determine success or failure, she urged all CSSD staff to seize the opportunity of this Open Day event to uphold professionalism, continuously explore, strive for excellence, fulfill their mission through actions, ensure the quality and safety of medical services, and wholeheartedly safeguard public health.

During the event, a popular science video created by the CSSD of Fuyang People's Hospital was played, titled "Decontamination with Heart, Sterilization with Care." The video comprehensively demonstrated the reprocessing process of urgent and delicate instruments. The guests present were all impressed by the video. It vividly illustrated the entire process from instrument recycling to distribution, changing guests' previous simplistic understanding of instrument reprocessing. All the guests personally realized how challenging and demanding the CSSD's work is.

To enhance communication with clinical departments, the Open Day event has added a tripartite dialogue between clinical departments, CSSD and operating rooms to discuss how to facilitate the efficient circulation of precision instruments. During the event, guests expressed their appreciation for the work done by the CSSD and provided suggestions on how to improve the efficient circulation of precision instruments. It was emphasized that the CSSD should assign dedicated personnel for the management of precision instruments, handle and maintain them correctly to ensure their longevity. Staff in the OR should assist the CSSD staff in strictly confirming urgent instrument requests to avoid unnecessary urgency, thus ensuring smooth surgeries, patient safety, and expediting the efficient circulation of precision instruments.

This Open Day event features a format of discussion followed by a tour. After the discussion session, all guests proceeded to the CSSD work areas for a tour.

The successful hosting of this Open Day event not only showcased the professional capabilities and services of the CSSD of Fuyang People's Hospital but also enhanced the understanding of CSSD and sterilization sciences among various departments.

In future work, CSSD staff will firmly adhere to the service concept of "patient-first" and provide high-quality nursing services for clinical care. They will tailor personalized services for operating rooms and clinical departments, dedicating themselves to safeguarding patient safety.
