

International Day of Sterilisation Sciences & CSSD Open Day

--Walk into CSSD of The First Affiliated Hospital of Xinxiang Medical
University

On the morning of April 8th, CSSD of The First Affiliated Hospital of Xinxiang Medical University launched the International Day of Sterilisation Sciences & CSSD Open House Day with the theme of "Excellence, Safety and Efficiency" in response to the call of WHFSS and implementing the hospital's humanistic spirit of "understand you and me".

This open house day event was highly valued and strongly supported by the hospital's leaders and the competent departments. We invited the dean in charge, directors of the quality and safety control office, the logistics management department and the infection control management department, the head of the nursing department, the deputy director of orthopedic surgery and gastrointestinal surgery department, the head nurse of the general surgery department and the head nurse of the surgical department participated in the event. In addition, the head nurse of CSSD of the Third Affiliated Hospital of Xinxiang Medical University and colleagues from Xinxiang Central Hospital were also invited to participate in this event.

Before the start of the activity, the head nurse of the CSSD delivered a welcome speech and introduced the process of this activity, the work situation of the CSSD, and the purpose of organizing this activity. We hope that we can truly "understand you and me" and enhance mutual trust by holding this activity.

During the visit, the CSSD staff introduced the work process of each work area to everyone, focusing on the rigid endoscope reprocessing, the quality inspection of loaner instruments and the monitoring process of high-temperature sterilization. Everyone has learned from the visit about how the CSSD can make the instruments perfectly transformed after use, and why the instruments need sufficient reprocessing time between use.

Dean Guo raised questions and provided suggestions on the daily maintenance of delicate instruments and the timely supply of surgical instruments when visiting the work process. We listened carefully and explained in detail. The visitors highly affirmed our work and understand our job through the visit.

During the visit, everyone also got to know the difficulties of working in CSSD. Dean Guo put forward suggestions on the occupational protection of nurses, showing care for them. He hoped that we should consider more the feelings of the nurses in the management and care for the CSSD nurses in every detail.

After the visit, we showed everyone the disassembly and assembly of endoscopic instruments, and fully demonstrated the professional ability and good work spirit of the CSSD nurses in reprocessing the instruments, which was highly praised by the people present.

After the operation demonstration, we had a communication meeting. The leaders of the meeting gave professional guidance to the CSSD. Clinical department communicated with us and gave us suggestions on the reprocessing of flexible endoscope. Dean Guo finally put forward work expectations for the CSSD, asking us to focus on quality and service in our work, do a good job in guaranteeing clinical work, and play its indispensable role in sterile supply. Finally, the open house day was ended in a pleasant atmosphere.

This open house day event fully implements the humanistic spirit of “understand you and me”, promotes the communication between the CSSD and various departments, and allows clinical staff to better understand the work and professional development of the CSSD.

Everything is ready for setting sail; More must be done for accomplishing our missions. The continuous progress and important status of the CSSD depends on the professional quality and services provided by all our CSSSD members. Because we are professional, we are excellent; because we are excellent, we are worth relying on.
