

**Openness and Integration Promotes Advancement  
Scientific Management Ensures Safety**  
**Jiaozuo People's Hospital celebrates the International Day of Sterilisation Sciences**

The World Federation for Hospital Sterilisation Sciences (WFHSS) designates April 10th as the International Day of Sterilisation Sciences, calling on the global CSSDs to open their doors on this day.

In order to actively respond to the call of WFHSS and better publicize the importance of scientific sterilization, help us improve our work, and plan multi-disciplinary collaboration, the CSSD of Jiaozuo People's Hospital held the International Day of Sterilisation Sciences with the theme of "Openness and Integration Promotes Advancement, Scientific Management Ensures Safety" at 10 a.m. on April 7.

The event was hosted by Director Shen Yao.

Guests from the Department of Infectious Diseases, Department of Instruments, Department of Laboratory, Department of Disease Prevention and Control and other relevant departments were invited. Director Shen Yao delivered a speech on the multi-disciplinary collaboration to promote the development through communication and open up to embrace the future.

This event deepened everyone's understanding of CSSD through on-site visits, interactive communication, etc., promoted sincere collaboration between the CSSD and various departments, deepened mutual understanding and trust for effective communication and patient safety.

## Communication and Cooperation for Patient Safety

The CSSD is known as the "heart of the hospital". It is not only the foundation of the hospital's medical quality and patient safety, but also the guarantee for the normal operation of medical care. CSSD maintains close contact and cooperation with various departments by supplying sterile instruments. Through communication and coordination, CSSD receives demands and develops corresponding supply plans to ensure the timely delivery of sterile items. Meanwhile, CSSD manages to avoid waste and the risk of cross-infection by coordination and disciplinary exchanges to help patient treatment.

During this event, Director Shen Yao introduced the significance of the event to each department and introduced the work flow of CSSD. Then Director Shen led everyone to visit the Sterile Storage Area, Inspection, Packaging and Sterilization Area, and Decontamination Area, and gave a detailed explanation of the work process, facilities, instruments and equipment, etc. Each visitor learned about the "mysterious" CSSD and the entire process, including returning, classification, cleaning, disinfection, inspection, packaging, sterilization, storage and distribution.

The CSSD is an indispensable part of the hospital. It is responsible for the cleaning, disinfection, sterilization and supply of various medical devices and items. Communicate effectively with departments, enhance understanding, achieve sincere cooperation, and ensure the smooth progress of medical work. The CSSD provides important support and guarantee for various departments in the hospital, ensuring patient safety.

The success of this event allowed each department to understand the daily work and how surgical instruments are transformed "from dirty to clean". Through this activity, the understanding and collaboration between the CSSD and various departments have been enhanced, and trust has been strengthened.

The CSSD will live up to the trust of leaders and patients, keeping in mind that there is a life behind every instrument, always putting "patient safety" in the first place, adhering to the concept of serving clinical departments, and continuing to uphold the rigorous, meticulous, and serious and responsible work spirit, strictly implementing the regulations and guidelines, and safeguarding the patient safety. We also need to learn multi-disciplinary knowledge, allowing people to study from different angles, and firmly follow the path of scientific development with an open attitude, actively ensure patient safety with a scientific attitude. In this way, we can jointly promote learning and development. It is hoped that all departments can support the work of CSSD and jointly create a safer and healthier medical environment for patients.
