

Caring for Clinical Needs, Supplying with Hearts and Warmth

The CSSD of Linfen People's Hospital held an Open Day Event

To enhance understanding among all clinical departments and operating rooms about the CSSD, and to promote collaboration between the CSSD and clinical department, on April 10th, the CSSD Linfen People's Hospital conducted its first Open Day event facing the whole hospital under the theme "Caring for Clinical Needs, Supplying with Hearts and Warmth".

This event was attended by Wang Haoshou, Secretary of the Hospital Party Committee, Jing Wenji, member of the Party Committee and Vice President, Wu Chunling, Vice President, along with more than 40 department heads, head nurses, and staff members who visited the disinfection supply center.

Vice Dean, WU Chunling

The activity was chaired by CSSD director WEN Jianping. The CSSD is an important line of defense in the hospital for preventing infections, and the work of disinfection and sterilization plays a crucial role in ensuring medical safety and patient health. CSSD of our hospital implements a centralized management model throughout the hospital, with a workforce that is becoming younger and more specialized, and equipment that is advanced and automated.

CSSD Director WEN Jianping

Through this activity, participants had an opportunity to visit the CSSD, learn about sterile items, experience the processes of cleaning, packaging, and sterilization, gain an understanding of the entire reprocessing process of reusable medical instruments and tools, and recognize the safety, effectiveness, and importance of sterile items.

Walking into Three Areas of CSSD

First Stop: Sterile Item Storage Area

CSSD head nurse ZHANG Mengtao explaining the storage and distribution of sterile items

Second Stop: Inspection, Packaging and Sterilization Area

Head nurse XIN Yanan introducing the process of inspection, packaging and sterilization, and dressing packaging.

ZHANG Yuan and ZHANG Ting demonstrating the standardized processes of inspection and package, including instrument inspection, maintenance, endoscope assembly, insulation monitoring, and more.

Third Stop: Decontamination Area

Nurse LI Ruihong introducing the processes of recycling, cleaning and disinfection. Staff demonstrating the operation procedure of manual cleaning.

The CSSD is now equipped with modern facilities for cleaning, disinfection, and sterilization, including three fully AERs, three pulsating vacuum steam sterilizers, three low-temperature plasma sterilizers, one low-temperature formaldehyde sterilizer, one ethylene oxide sterilizer, one drying cabinet, two ultrasonic cleaners, insulation monitoring devices, two sealing machines, biological monitoring devices, ATP testers, and various other cutting-edge equipment.

During the visit, guests learned about the ten standardized operating procedures, which deepened their understanding of CSSD's daily work and unveiled the "mysterious veil" of sterilized item processing.

After the visit, a discussion was held where the visitors expressed their opinions and suggestions regarding the CSSD. The discussion was chaired by REN Liying, the director of the Nursing Department.

The director of the Infection Control Department, TAI Suqin, stated that the CSSD is a key department in hospital infection control. The open day event aims to help everyone understand the importance of the daily work of CSSD staff.

WANG Haoshou pointed out in the summary that through this activity, not only has there been a deepened understanding of the equipment and facilities at the CSSD, but it has also enhanced everyone's understanding of the work of the CSSD, the heroes behind the scenes. It is hoped that the CSSD will continue to excel in their work in the future, persist in caring for the clinical needs and supplying with heart and warmth, provide higher quality services for clinical departments, and offer strong safety guarantees for the hospital's high-quality development.
