

Adhere to Standards, Scientific Sterilization.

The first CSSD Open Day activity held by the CSSD of Lintao County
Hospital of TCM

The World Federation for Hospital Sterilisation Sciences (WFHSS) designates April 10 as the International Day of Sterilisation Sciences, calling on global CSSDs to open their doors. On the afternoon of April 10, the Nursing Department of Lintao County Hospital of TCM collaborated with the CSSD to host the Open Day activity, inviting hospital leaders and department head nurses to participate.

The activity commenced with a signing ceremony. The activity was chaired by the CSSD head nurse, at the beginning, the hospital dean, MA Tingzhen, delivered a speech, emphasizing that, although CSSD is very mysterious and not well-known by people, although it never deals with patients directly, it is a very vital role in safeguarding medical safety. The aim of the Open Day activity was to enhance collaboration among departments, raise awareness of the importance of infection control among hospital staff, and encourage everyone to contribute to creating a safe and sterile medical environment.

Subsequently, guided by three CSSD staff, through live demonstrations and interactive Q&A sessions, all visitors detailly learned about the cleaning, disinfection, sterilization, and final quality inspection of medical instruments. By observing these intricate and complex processes, everyone gained a clear understanding of the technical level of hospital infection control. The CSSD staff also showcased the latest sterilization technology and equipment, including low-temperature plasma sterilizers, high-pressure steam sterilization cabinets. Particularly after witnessing the use of high-tech equipment such as low-temperature plasma sterilizers and high-pressure steam sterilization cabinets, everyone indeed had a deeper experience of the high standards and requirements of infection control in hospitals.

In concluding remarks, the hospital's Party Secretary, XIA Qingde, highlighted the significance of the Open Day activity in fostering a strong hospital culture and internal communication. He emphasized that, with face-to-face communication and personal experience, everyone could have a deeper understanding of the importance of CSSD, which is significant in raising hospital staff' s awareness on medical safety and infection control. XIA Qingde pointed out that such activities break down barriers between departments, promote understanding and cooperation among different positions, and contribute to a united effort in maintaining hospital safety and ensuring patient health.

Secretary XIA Qingde also mentioned that the teamwork and professional enthusiasm displayed during the activity are integral to the hospital's culture. He encouraged all staff, whether directly involved in patient care or not, to uphold a scientific spirit, continuously learn, and enhance their professional skills. To advance infection control efforts and improve service quality, departments should creatively organize similar open day activities, allowing more employees to gain insights into various hospital departments, especially those key departments less known to the public. This initiative aims to strengthen internal cohesion and provide patients with safer, more efficient, and more humane medical services.
