

Keep Sterility in Mind, Set No Limit for Cleanliness: Revealing the Mystery of CSSD

To strengthen the communication between CSSD and other departments and to spread the knowledge of sterilization sciences, on April 13th, Lushan People's Hospital held a CSSD Open Day activity with the theme of "Keep Sterility in Mind, Set No Limit for Cleanliness". Dean of the hospital Wen Yuzhen, some other team members, and directors and the head nurses of Surgical Departments were invited and participated in the activity.

During the activity, the head nurse Jin Xinhuan introduced comprehensively about the layout of department, equipment and facilities, and the overall process.

Then she showed the visitors around CSSD and they all learned in detail about the whole process of instrument reprocessing: recycle, classification, cleaning, disinfection, drying, inspection, packaging, sterilization, storage and distribution. The visitors all took a closer look and all learned a lot about modern equipment and facilities for cleaning, disinfection and sterilization. CSSD nurses demonstrated the inspection and packaging process on the spot, revealing the mystery of sterile processing and further enhancing people's understanding of CSSD.

At the subsequent symposium, the participants had a discussion together and everyone was shocked by the great changes that had happened in CSSD. They said: "I didn't expect the disinfection devices to be so advanced now, and I had no idea that CSSD was doing so meticulously on instruments inspection and care!"

After the visit, Dean Wen Yuzhen said: "All the staffs in CSSD, as always, have truly kept their original aspirations and their missions in mind. I'm astonished by the environment of CSSD and I'm surprised to see how spirited the staffs are. Our CSSD construction leads the development of other hospitals' CSSD in Pingdingshan city, and also leads the CSSD construction for county-level hospitals in Henan Province. I hope the publicity of our CSSD can be strengthened and more talent trainings can be provided and more CSSD's work can be summarized."

Central Sterile Supply Department (CSSD) is a sterile supply department that is responsible for the recycle, cleaning, disinfection, sterilization and supply of all reusable medical devices and instruments.

CSSD of Lushan People's Hospital has a construction area of 1400m², and the team is reasonably staffed, professional, enterprising, pioneering and innovative. It has reached a high level in China in terms of standardized graphic design, advanced equipment configuration, engineering safety, and professional operation process.

CSSD of Lushan People's Hospital is equipped with many equipment and facilities, such as 2 sets of MAST-H-1500 Pre-vacuum Steam Sterilizer (Sliding-Door), 2 sets of Low-temperature Hydrogen Peroxide Sterilizer, 3 sets of Super6000 High-efficiency Automatic Washer-Disinfector, 1 set of PC-150L Pulse Vacuum Washer-Disinfector, a Multifunctional Cleaning Center, Endoscope Cleaning Workstation and etc. An informatization quality management traceability system is equipped as well, which can trace the whole process of sterile items, meeting the standard requirements of the national CSSD on quality control and traceability.

With its professional team, advanced equipment, standardized procedures and strict management, CSSD of Lushan People's Hospital can ensure medical safety reliably and confidently.
