

Sterilization Matters to Everyone and Ensures Safety

People's Hospital of Qinghai Province celebrates The International Day of Sterilisation Sciences

The World Federation for Hospital Sterilisation Sciences (WFHSS) designates April 10th as the International Day of Sterilisation Sciences, calling on the global CSSDs to open their doors on this day.

The CSSD of People's Hospital of Qinghai Province held an open house event with the theme of Sterilization Matters to Everyone and Ensures Safety to answer the call of WFHSS, publicize the importance of scientific sterilization, popularize the entire process of instrument reprocessing and sterilization-related knowledge, and promote the safety of the supply and use of sterile items, and promote the scientific, standardized, safe and efficient development of CSSD on April 10, 2024.

This event was hosted by Lamao Dolma, the head nurse of the CSSD. More than 40 people from the Nursing Department, clinical department managers and nursing staff were invited to the CSSD for an in-depth understanding of the building layout and work processes.

The visitors were divided into three groups and visited the three major work areas: the Sterile Storage Area, the Inspection Packaging and Sterilization Area, and the Decontamination Area. They learned about the environment, staffing, equipment and the ten major work processes, quality standards and cultural construction and other aspects. During the visit, the CSSD staff answered questions and demonstrated inspection and packaging techniques, allowing them to fully understand the daily key tasks.

A discussion and exchange activity was held. The staff had a heated discussion with the visitors. Everyone said that the sterilization quality of medical devices was related to the safety of every patient. Through this activity, they deeply felt the importance of sterilization. Visitors witnessed the significant progress in terms of building layout, operating practices and equipment management, and the "gorgeous transformation" of CSSD in infection management. The scientific and rigorous work attitude, serious and solid professional ability and careful and high-quality service left a deep impression on the visitors. The atmosphere at the scene was harmonious, fully demonstrating the openness, tolerance and cooperation spirit of CSSD.

CSSD play a key role in infection prevention and control, material support, and public health emergencies. Since the centralized management was implemented, with the care and support of hospital leaders and the Nursing Department, and with the assistance of various clinical departments, we have always adhered to the work concept of "patient safety" and strengthened the equipment management, improved the level of refined management and promoted the high-quality development of CSSD. This event fully demonstrated the standardized work processes, risk points and quality control points.

In the future, CSSD will always stick to the work philosophy of "Sterilization Matters to Everyone and Ensures Safety", further improves the level of specialization, standardization, and refinement, scientific innovation, standard operations, attentive service, and firmly establish infection risk prevention awareness and provide solid support for medical safety and infection prevention and control.
