Zhao Chun provided an introduction of the department, covering the layout, working processes, the facilities and equipment, department management, and achievements.

Zhao Chun was introducing the department

The participants then watched the promotional video of the CSSD titled "Invisible Infection Control, Visible Medical Safety" and a short educational video on pretreatment titled "Life-Saving Details Often Overlooked in Disinfection and Sterilization." This allowed the participants to gain a new understanding of the work of the CSSD.

Professor Huang Hao gave a detailed and in-depth explanation of the group standard on "Quality Management and Evaluation of Sterile Supplies" from three aspects: the background of standard development, content interpretation, and the significance and importance of standard, using a wealth of hospital acquired infection cases and discussing the current risks in sterile supply management. She hoped that all the sterile supply professionals would "do good through professionalism, as behind every instrument lies a vibrant life," helping us to realize our responsibility is as solid as rock and our mission is pressing.

Participants are focusing on the lecture

After the lecture, an enthusiastic discussion session began, where representatives from various offsite sterile supply centers and clinical departments actively spoke up about difficulties, doubts, and challenges they encountered in their work, with Huang Hao and quality control experts providing precise answers and engaging in deep discussions.

Discussion Session

The staff of the CSSD organized a tour of the department, where three exhibition booths were set up outside the venue, displaying consumables related to cleaning, disinfection, sterilization, monitoring, and surgical instruments.

The lead instructor and regional group leader provided a detailed explanation of the environmental layout and working processes to the guests. Through professional explanations and physical demonstrations, staff from clinical departments and offsite sterile supply centers were able to gain a deeper understanding of the working procedures of the CSSD and related sterile supply standards.

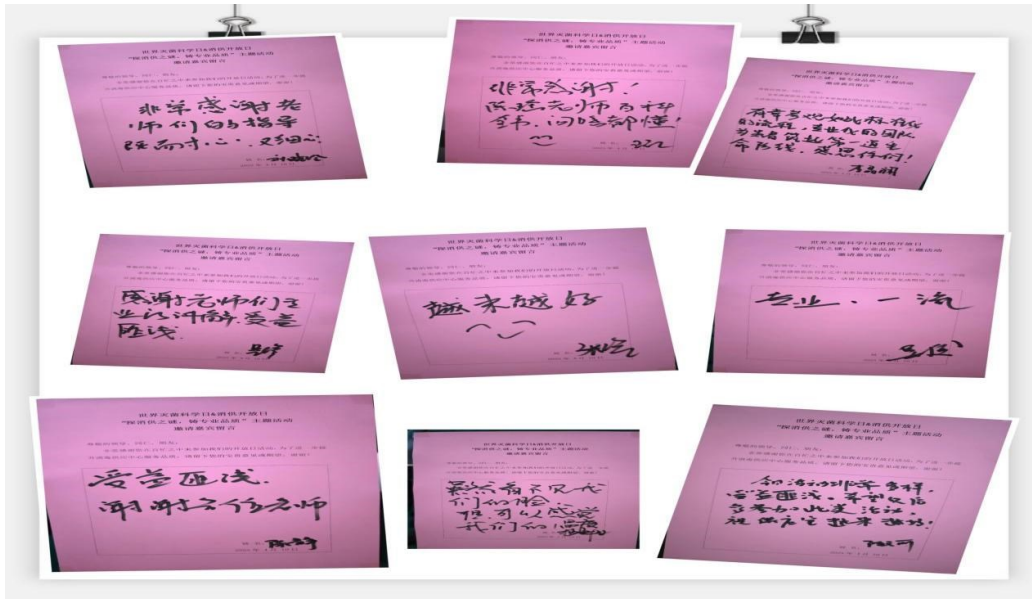

On-site Visit

After the visit, several guests from offsite sterile supply centers shared their impressions of the tour and provided valuable feedback, expressing their hope to participate more in events like the CSSD Open Day. One guest noted, "Patients may not see our faces, but they can feel our warmth." I believe all of us in sterile supply hope that the cold instruments ultimately bring a touch of warmth to the patients.

Messages from visitors

Li Rongmei was giving a summary

Vice President Li Rongmei highly praised the successful organization of this event and sincerely thanked the experts from West China Hospital for their guidance. She stated that the CSSD is crucial to infection control in hospitals, directly relating to the quality of medical care and the life and safety of both patients and medical staff. She hoped that this open day event would further enhance communication and collaboration between the CSSD and various clinical departments and offsite sterile supply centers, promoting the healthy development of this field and collaboratively building a safety barrier for regional healthcare affairs. The invitation of patient families to participate was the highlight of this event, further enhancing public trust in medical safety. She expressed the hope that staff in the CSSD would live up to expectations and strive to meet clinical needs, safeguarding instrument safety and ensuring patient safety with their professionalism.

The 9th International Day of Sterilisation Sciences CSSD Open Day Event, hosted by the First

People's Hospital of Longquanyi District Chengdu and the Longquanyi District Sterile Supply Quality Control Center, successfully concluded.
