From: The First People's Hospital of Zhaotong

From April 12 to April 14, an open day activity with the theme of "Unveiling the Myth of Sterilization and Promoting CSSD Development" was hosted by the CSSD of The First People's Hospital of Zhaotong to celebrate the International Day of Sterilisation Sciences. This event was co-organized by the CSSD Quality Control Center. Hospital leaders, clinical departments, medical institutions, functional departments and representatives of patients were invited to CSSD. They visited the decontamination area, inspection, packing and sterilization area and other areas in the CSSD. By virtue of this open day, they understood the rigorous and scientific working procedures of CSSD as well as the major reprocessing steps of reusable medical instruments.

Responding to the call of WFHSS and Celebrating the International Day of Sterilisation Sciences

The CSSD actively responded to the call of the World Federation for Hospital Sterilisation Sciences (WFHSS) to open their doors. To celebrate the International Day of Sterilisation Sciences, they planned and hold a series of activities such as on-site visiting, hands-on practices, and communication session to exchange ideas. They comprehensively demonstrated the collecting, cleaning, disinfection, packing and sterilization of reusable medical devices to enhance people's understanding of CSSD and to promote the safety and efficiency of supply and use of sterile items.

Get to know CSSD better in on-site visiting and feel assured by the standardized practices

During the 3-day event, the CSSD invited more than 130 people to observe the standardized processing procedure of reusable medical devices, instruments and items. Yin Chongxiu, an invited guest, said that he was impressed by the CSSD. He used to think that the duties of CSSD were simple and easy. He said that thanks to the standardized and rigorous working procedures of CSSD, patients could use safe medical instruments without contamination and infection.

Exchanging ideas and Eliminating concerns

In the communication sessions of collecting advice and eliminating concerns, visitors freely talked about their feelings and thoughts based on their departments and positions and made suggestions. Through this session, the mutual understanding between clinical departments and the CSSD was enhanced, a friendly relationship between doctors and patients was built, and the existing misunderstandings between different departments were eliminated. A colleague said, “this was the core value of this hospital: every staff worked rigorously and meticulously. They were all equipped with theoretical knowledge and professional skills. ”

Working hard for a bright future

This event not only allowed people to understand more about the hard work of CSSD, but also enabled the CSSD to better understand the needs and demands of clinical departments.

Through this activity, the CSSD will focus more on the “emergencies, difficulties, worries and expectations” of clinical departments and respond to them. By solving the problems of sterilization and supply and providing high quality services for clinical departments, the patient safety can be promoted. Let’s work together for a better future!
