

Unveiling the myths of CSSD, Building a way of Cooperation

International Day of Sterilisation Sciences and CSSD Open House Activity
West China Airport Hospital of Sichuan University

By Liu Xinli

The World Federation for Hospital Sterilisation Sciences (WFHSS) designates April 10 as the International Day of Sterilisation Sciences, calling on the global CSSDs to open their doors. West China Airport Hospital answered the call and hosted an open house activity with a theme of Unveiling the myths of CSSD and Building a way of Cooperation, when the visitors from OR and other clinical departments joined this activity.

This activity aims to increase understanding, foster collaboration and improve quality. Head nurse Liu Xinli, a member of CSSD group of National Primary Medical Institution and the chief nurse of the disinfection and supply center of West China Airport Hospital of Sichuan University, explained to the visitors about the precleaning after use, collecting, classification, cleaning and disinfection, inspection and care, packaging, sterilization, monitoring, and distribution. She also emphasized on the pretreatment of delicate instruments and different sterilization methods and requirements.

After the visit, CSSD and OR staff sat together to discuss the existing issues in the daily work and raised solutions for better cooperation and improvement.

CSSD functions like the heart to the hospital and is responsible for the supply of reusable instruments for the whole hospital. CSSD is a key department for hospital infection, and its work quality is closely related to medical safety. Through this activity, we will further smooth the communication channels, promote exchanges and collaboration, improve the quality of work, and ensure medical safety!
